SENIOR DEVOPS ENGINEER | PLATFORM ENGINEER | AWS CLOUD ENGINEER | SRE-FOCUSED DEVOPS

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 10+ years of experience designing, automating, and optimizing AWS-based cloud platforms in collaboration with application and engineering teams. Strong background in infrastructure automation, centralized CI/CD enablement, cloud reliability, observability, platform security, and cost optimization. Hands-on expertise building Infrastructure as Code solutions using Terraform, CloudFormation, ARM/Bicep, and AWS CDK, along with CI/CD pipelines using GitHub Actions, Jenkins, Azure DevOps, and GitLab CI. Experienced in container platforms including Kubernetes, EKS, AKS, ECS, and Docker, with a track record of improving scalability, operational efficiency, governance, and cloud cost performance. Adept at mentoring teams, driving platform standards, and enabling secure, reusable cloud architecture patterns across AWS environments.

KEY SKILLS & EXPERTISE

Cloud Platform Engineering: AWS platform architecture, reusable infrastructure patterns, multi-team enablement, platform standardization, self-service infrastructure

Infrastructure as Code: Terraform, AWS CloudFormation, AWS CDK, ARM/Bicep, Ansible

CI/CD & Release Engineering: GitHub Actions, Jenkins, GitLab CI, Azure DevOps, AWS CodePipeline, centralized deployment frameworks

AWS Services: Lambda, EventBridge, Step Functions, Glue, EC2, ECS, EKS, RDS, S3, IAM, CloudWatch, VPC

Observability & Reliability: CloudWatch, Prometheus, Grafana, ELK Stack, Datadog, Splunk, Azure Monitor, alerting, dashboards, service reliability

Scripting & Automation: Python, Golang, Bash, PowerShell

Containers & Kubernetes: Docker, Kubernetes, Helm, kubectl, EKS, AKS, ECS

Security & Governance: IAM, KMS, least-privilege access, cross-account roles, cloud security controls, compliance support

FinOps & Optimization: AWS cost optimization, resource rightsizing, lifecycle policies, usage reporting, forecasting support

Collaboration & Delivery: cross-functional engineering partnership, architecture standards, DevOps best practices, mentoring, technical enablement

ACCOMPLISHMENTS

Fidelity Investments – Archive Data Migration Project

- Led the migration of a 7-year archive from Oracle to AWS S3 and Snowflake, ensuring data integrity and minimal operational disruption.
- Designed and implemented SQL procedures and filtering logic to identify and extract eligible archival records based on retention requirements.
- Built a data validation framework to confirm consistency between Oracle and Snowflake prior to purge and cutover activities.
- Automated Oracle purge workflows for successfully migrated records to support data retention and operational compliance.
- Improved migration efficiency by 60% using AWS Glue and Snowflake staging processes.
- Created CloudWatch dashboards and monitoring to track migration progress and highlight anomalies for timely remediation.
- Partnered with security teams to enforce IAM roles and secure data access throughout the migration lifecycle.

FinOps / AWS Automation Project

- Developed Python-based AWS Lambda automation to manage EC2 Auto Scaling groups, RDS, EKS, and EMR resources.
- Integrated EventBridge, CloudWatch alerts, and S3 to support event-driven execution, monitoring, and reporting.
- Created CloudFormation templates and deployment scripts to automate infrastructure provisioning and improve repeatability.

- Used GitHub-based version control and change review practices to improve code quality and deployment governance.
 - Implemented cross-account IAM roles for secure automation across AWS environments.
 - Automated non-production scheduling and power controls, reducing AWS cloud spend significantly.
 - Built metadata collection workflows for EC2, ASG, RDS, EKS, and EMR and stored outputs in S3 for reporting and analysis.
 - Automated ingestion of infrastructure metadata into PostgreSQL to support cloud cost and performance dashboards.
 - Built Jenkins CI/CD pipelines to deploy CloudFormation templates and support standardized infrastructure delivery.
-

PROFESSIONAL EXPERIENCE

Fidelity Investments

Senior DevOps Engineer / FinOps Engineer (Contract) | 02/2024 – 12/2025

- Developed Python-based AWS Lambda services to automate operational workflows and reduce manual intervention by 75%.
- Designed and deployed event-driven AWS solutions using CloudFormation, EventBridge, CloudWatch, and Step Functions.
- Built and maintained reusable infrastructure automation patterns to improve consistency, governance, and deployment speed across cloud environments.
- Implemented process controls and operational standards to support secure, scalable cloud platform delivery.
- Partnered with engineering and finance stakeholders to align cloud operations, usage visibility, and cost optimization initiatives.
- Created automated dashboards and reporting for spend tracking, variance analysis, and cloud usage insights.
- Designed secure IAM roles and cross-account access controls to support platform automation and least-privilege access.

- Implemented CI/CD pipelines using Jenkins and GitHub Actions to streamline application and infrastructure deployment workflows.
- Automated AWS Glue ETL jobs using Python and PySpark for scalable data processing.
- Optimized AWS costs through automated shutdown scheduling, resource rightsizing, and lifecycle management, reducing cloud expenses by 35–50%.
- Provisioned and managed AWS infrastructure using Terraform and Ansible across EC2, RDS, and ECS environments.
- Mentored team members on AWS best practices, infrastructure automation, and operational excellence.

Ruby Receptionist LLC

Senior DevOps Engineer / Cloud Platform Engineer | 02/2022 – 11/2023

- Automated cloud infrastructure deployment using Terraform, CloudFormation, and Ansible to improve standardization and repeatability.
- Developed Golang-based provisioning tools and Python-based Lambda automation for AWS environments.
- Built and maintained CI/CD pipelines using Jenkins, GitHub, and AWS CodePipeline to support reliable multi-team software delivery.
- Implemented AWS cost optimization strategies that reduced monthly cloud expenses by 30%.
- Managed IAM roles, policies, and access controls to strengthen security and governance across cloud resources.
- Optimized Docker images and Kubernetes deployments to improve scalability, performance, and reliability of containerized applications.
- Established continuous security scanning and vulnerability management practices to improve platform security posture.
- Led monthly EC2 patching and cloud security reviews to maintain compliance and operational readiness.
- Supported deployments across AWS and Azure, partnering with application teams on cloud architecture and release processes.

- Managed AKS and EKS clusters for containerized workloads using Helm and Kubernetes best practices.
- Automated Azure resource provisioning using Terraform and ARM templates.
- Built Azure DevOps CI/CD pipelines for .NET applications hosted on Azure App Services, reducing deployment time by 60%.

D.C DYNA INC. / CAVLOG

DevOps Engineer | 02/2019 – 12/2021

- Built and maintained GitLab CI/CD pipelines to automate software builds, testing, and deployments.
- Implemented Infrastructure as Code using Terraform and Ansible to provision and manage AWS environments.
- Developed monitoring, logging, and alerting solutions using Prometheus, Grafana, and CloudWatch to improve availability and operational visibility.
- Deployed Kubernetes clusters on EKS to improve application scalability, resilience, and container orchestration maturity.
- Automated server patching and maintenance using Bash and Python, reducing downtime and improving consistency.
- Designed and enforced AWS IAM policies aligned with least-privilege access principles.
- Optimized compute and storage costs using S3 lifecycle policies and EC2 rightsizing strategies.
- Led security audits and vulnerability assessments to strengthen cloud security posture.
- Worked closely with development teams to integrate DevOps standards and automation into the software development lifecycle.
- Provided on-call support for AWS production environments to maintain uptime and service reliability.

OVH US

Linux Systems Administrator / Cloud Infrastructure Engineer | 06/2016 – 01/2019

- Provisioned and managed AWS environments with a focus on scalability, availability, and security.

- Migrated VMware-based on-premises infrastructure to AWS, reducing operational costs by 20%.
- Automated routine infrastructure tasks using Bash and Python scripting.
- Implemented centralized logging using ELK Stack and AWS CloudWatch.
- Configured IAM roles, policies, and security groups to strengthen AWS security controls.
- Tuned Linux server performance and resolved infrastructure issues to maintain high uptime.
- Designed AWS networking solutions using VPC, Route 53, and VPN gateways.
- Built monitoring solutions using Prometheus and Grafana to improve visibility into system health and performance.
- Supported compliance efforts by aligning operational practices with cloud security best practices.
- Led migration of legacy applications to Docker-based containerized environments.

EDUCATION

Anne Arundel Community College (AACC)

Associate Degree in Information Assurance and Cybersecurity | May 2016

CERTIFICATIONS

- AWS Certified Developer
- VMware Cloud on AWS – Trained Professional
